

## ABSTRACT

A collapsible kennel for use with capped truck beds includes a foldable floor section connected to a foldable wall section. When unfolded and assembled, the floor section is supported by a truck bed's side rails. If only a front wall section is used, the kennel must be abutted to the cab of the truck. If a front and a back wall section are used, the kennel may be anywhere along the length of the truck bed's side rails. The truck cap provides a ceiling and two sides. The wall section has doors to allow animal ingress and egress. The doors may be remotely opened by pulling a cord. The collapsible kennel has a divider for selectively dividing the kennel. When collapsed, the kennel can be easily stored and transported.
